Sequence 6, Application US/09510031A
Patent No. 6638518
GENERAL INFORMATION:
APPLICANT: Rathle, Joel
TITLE OF INVENTION: METHOD FOR INHIBITING INFLAMMATORY RESPONSES
FILE REPERENCE: 140.010 010
CURRENT APPLICATION NUMBER: US/09/510,031A
CURRENT FILING DATE: 2000-02-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 2, Application US/09985372

Patent No. 6676945

GENERAL INFORMATION:
APPLICANT: LAQUEYRERIE, Anne
APPLICANT: ROMAIN: Pascale
APPLICANT: ROMAIN: Pelix
APPLICANT: ROMAIN: Pelix
TITLE OF INVENTION: MYCOBACTERIAL PROTEINS, MICORORGANISMS PRODUCING THEM
TITLE OF INVENTION: TUBRECLOSIS
TITLE OF INVENTION: AND THEIR USE FOR VACCINES AND FOR THE DETECTION OF
TITLE OF INVENTION: USGROUPH OF THE DETECTION OF
TITLE OF INVENTION: WORDER: US/09/985,372
CURRENT FILING DATE: 2001-11-02
PRIOR FILING DATE: EARLIER APPLICATION NUMBER: 09/132,528

PRIOR FILING DATE: BARLIER FILING DATE: 1998-08-11

NUMBER: OF SEQUENCY.
                                                                                                                                                                                                                                                               ;

                                                                                                                                                                      Sequence 53, Application US/09056556
Patent No. 6350456
Patent No. 6350456
GENERAL INFORMATION:
APPLICANT: Need, Steven G.
APPLICANT: Skeiky, Yasir A.W.
APPLICANT: Skeiky, Yasir A.W.
APPLICANT: Oblion, Davin C.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THE PREVENTION AND NUMBER OF SEQUENCES: 241
CORRESSONDENCES: 241
CORRESSONDENCE SEED and BERRY LLP
STREET: 6300 Columbia Center, 701 Fifth Avenue
CITY: Seattle
STRYEE: Mashington
COUNTRY: USA
ZIP: 98104-7092
ZIP: 98104-7092
COMPUTER: IEM PC compatible
COMPUTER: BEN PC compatible
COMPUTER: PatentIN Release #1.0, Version #1.30
CURRENT AFPLICATION NUMBER: US/09/056,556
FILING DATE: 07-APR-1998
CLASSIFICATION NUMBER: US/09/056,556
FILING DATE: O7-APR-1998
REGISTRATION:

Romain F; Pescher P, Ġ WFI; 1996-371433/37. N-PSDB; AAT39357. Mycobacterium tuberculosis antigen and hybrid proteins comprising it useful in vaccines against tuberculosis and in immunoassays.

Claim 2; Page 49-50; 74pp; French.

This is the amino acid sequence of an antigenic determinant protein from Mycobacterium tuberculosis. The mature protein has calculated mol. wt. of 28779 Da but has an experimental mol. wt of 45-47 kD as determined by SDS -PAGE. The difference is thought to be due to the high frequency of Pro

```
residues (21.7%) in the sequence. The protein was purified from M. tuberculosis strain H73Rb by conventional chromatographic methods e.g. low pressure ion exchange chromatography, Si 300 gel filtration, DEAE ion exchange and reverse phase column chromatography. The proteins were then separated by SDS-PAGE and immunogenic proteins determined with immune complex of mol. wt. 45-47 kD was identified. An expression library of genomic M. tuberculosis. A complex of mol. wt. 45-47 kD was identified. An expression library of genomic M. tuberculosis DN was generated in the cosmid vector pYUB18. The library was transformed inco M. smegnatis. Clones expressing antigenic determinants were isolated by screening with an antibody against the M. contained identical sequences i.e. the sequence presented here. The protein or microorganisms expressing it can be used as vaccines against tuberculosis. Also Mybrid proteins comprising this proteins and epitopes from other disease causing organisms or proteins, e.g. diphtheria or cholera toxin, can be used as vaccines against their respective diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               240

The present sequence is that of the Mycobacterium tuberculosis (Mtb) strain H71Rv gene Rv1860 product, designated ModD MT732. This is one of AAMS0729-59) discovered or cytocolic Mtb proteins of strain H31Rv (see AAMS0729-59) discovered through the use of 2-dimensional liquid phase electrophoresis coupled with an in vitro interferon-gamma assay and liquid chromatography-mass spectrometry. The immunogens stimulate a strong interferon-gamma response from T cells of M. tuberculosis infected mice. The invention provides vaccine compositions for boosting immunity to mycobacteria when administered in mid-life to a subject who has been vaccinated neonatally or in early childhood with BCG and in whom protective immunity has waned. The vaccine compositions comprise 1 or more of the 31 purified immunogenic proteins. When used as immunogens, the secreted Mtb proteins lack the secreted signal sequence. A preferred protein is Ag85A (see AAMS0759), the secreted product of the Rv3084v gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      180

                                                                                                                                                                                                                                                                                                       A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, DPEP. The immunogenic polypeptide can be used to diagnose M.tuberculosis infection by forming complexes with specific antibodies in the sample. Fragments of DNA encoding the immunogenic polypeptide can be used as diagnostic primers or probes and agence that bind to the antigen, especially monoclonal antibodies or equivalent polyclonal antibodies, are

A new immunogenic polypeptide has been developed comprising an immunogenic part of a soluble Mycobacterium tuberculosis antigen (or its variant differing only in conservative substitutions and/or modifications). The present sequence represents a M.tuberculosis antigen, DPEP. The immunogenic protein, and fusion proteins containing one or more of the proteins of the proteins plus EART-6, are useful in vaccines, preferably when formulated with a non-specific adjuvant, to induce an immune response against M.tuberculosis (for treatment or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GVIGSPAANAPDAGPPORWFVVWLGTANNPVDKGAAKALAESIRPLVAPPPAPAPAPAEP 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This polypeptide comprises the Mycobacterium tuberculosis antigen DPEP. A bulb sequence (see AAV44390) coding for DPEP was isolated from a M. tuberculosis genomic library using a probe based on an isolated N-terminal peptide (see AAW64447). The invention relates to compositions and methods for diagnosing tuberculosis. It provides polypeptides (see AAW64491-W64319) comprising an antigenic portion of a soluble M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis antigen, or an immunogenic portion of an M. tuberculosis expression vectors and transformed or transfected host cells. Also claimed are methods and diagnostic kits for detecting M. tuberculosis in frection in a patient using these polypeptides, antibodies or oligonucleotide probes and primers, for the diagnosis of tuberculosis oligonucleotide probes and primers, for the diagnosis of tuberculosis. (Updated on 17-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
```

```
This sequence represents an immunogenic portion of a soluble Mycobacterium tuberculosis (MT) antigen which can be used in a method for inducing protective immunity against tuberculosis (TB). This sequence can be formulated into vaccines and/or pharmaceutical compositions for immunising against M. tuberculosis infection or may be used for the diagnosis of tuberculosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fusion protein containing M. tuberculosis Ag's. Macoines to protein containing M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or tuberculosis to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AAZ1949 to AAX19460 and AAX199083 to AAX39225 are used in the exemplification of

Compositions comprising at least 2 heterologous antigens, as a fusion protein, and vectors expressing the fusion proteins are used as vaccines to prophylactically immunise mammals (especially minans) against infection by Mycobacteria. The compositions contein at least 2 heterologous antigens that increase the serological sensitivity of individuals infected with tuberculosis, a disease frequently affecting

Mycobacterium species, useful for eliciting immune response in

```
ö
polypeptide or its fragment. The Leishmania polynucleotide is selected are used in methods for eliciting immune response in mammals. They are useful as vaccines to elicit protective immunity against pathogenic microorganisms such as Leishmania and Mycobacterium tuberculosis. Fusion polypeptides are used for enhancing the expression of polynucleotides. Fusion in vivo diagnostic agents and for raising antibodies in a non-human animal. The invention is used in gene therapy. The present sequence is M. tuberculosis DPEP antigenic protein

Composition comprising MTB39 antigen and MTB32A antigen from

WPI; 2002-147798/19

N-PSDB; AAD28355

```
The present invention relates to fusion proteins containing at least two Mycobacterium species antigens, nucleotides encoding them and compositions comprising such fusion proteins. The present invention particularly relates to nucleic acids encoding fusion proteins that include two or more individual M. tuberculosis antigens which increase the serological sensitivity of sera from individuals infected with cuberculosis and methods for their use in diagnosis, prevention and treatment of tuberculosis infection. Sequences of the invention and treatment of tuberculosis infection. Sequences of the invention and treatment of tuberculosis infection. Sequences of the invention and prevention of Mycobacterium infection. In the diagnosis, treatment and prevention of Mycobacterium infection. The fusion proteins and the polymuclectides are useful as diagnostic tools in patients infected with Mycobacterium, in vitro and in vivo assays for detecting humoral antibodies or cell-mediated immunity against M. tuberculosis, for the diagnosis of an infection or monitoring of disease progression, as immunogens to generate or elicit a protective immune response in a patient and for raising anti-M. Tuberculosis antibodies in a non-human animal. Sequences of the invention are also used as vaccines MTB32A fusion proteins of the invention are useful as in vivo diagnostic and minal sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              유
                                                                                                                                                                                                                                                                                                                                                                                         A new method of treating an inflammatory response comprises administering an microbial polypeptide which is preferably a mycobacterial polypeptide. The method is particularly useful for treating or inhibiting a Th2 mediated inflammatory response. The inflammatory response is associated with a disease such as skin allergy, hives, allergic thinitis, conjunctivitis, hay fever, allergy, hives, allergic thinitis, specifically, the asthma is intrinsic, i.e. associated with an irritant (e.g., a pathogen causing a respiratory tract infection in a mammal, or an inhaled pollutant). The asthma may also be extrinsic, which includes allergic asthma, occupational asthma or allergic bronchopulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120

This is the amino acid sequence of the mature potion of an antigenic determinant protein from Mycobacterium tuberculosis. The mature protein has calculated mol. wt. of 28779 Da but has an experimental mol. wt of 45 - 47 kp as determined by SDS-PAGE. The difference is thought to be due to the high frequency of Pro residues (21.7%) in the sequence. The protein was purified from W. tuberculosis strain H37Rb by conventional conformatographic methods e.g. low pressure ion exchange chromatography. The proteins were then separated by SDS-PAGE and chromatography. The proteins were then separated by SDS-PAGE and chromatography. The proteins were then separated by SDS-PAGE and chromatography. The proteins determined with immune serum from humans with TB or ginned pigs infected with W. tuberculosis. A complex of mol. wt. 45-47 kb was identified. An expression library of genomic W. tuberculosis DNA was generated in the cosmid vector pyUB18. The library was transformed into M. Smegmatis. Clones expressing antigenic determinants were isolated by screening with an antibody against the W. bovis BCG 45/47 kb proteins. Sclones were isolated here. The protein or microorganisms expressing it can be used as vaccines against tuberculosis. Also hybrid proteins comprising this protein and epitopes from other disease causing organisms or proteins, e.g. diphtheria or cholera toxin, can be used as vaccines against their respective diseases
                                                                            Antigenic determinant, Mycobacterium tuberculosis, ion exchange; human, chromatography; gel filtration; reverse phase column chromatography; immunogenic; serum; guinnea pig; expression vector; cosmid; antibody; Mycobacterium smegmatis; Mycobacterium bovis BGG; microorganism; vaccine; hybrid; epitope; disease; diphtheria; cholera; toxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              220 SASYYEVKFSDPSKPNQQIWTGVIGSPAANAPDAGPPQRWFVVALGTANNPVDKGAAKAL 279

The present invention describes polypeptides comprising an immunogenic part of a Mycobacterium tuberculosis antigen (Ag). Also described are vaccines and fuelon protein containing M. tuberculosis Ag's. M. tuberculosis Ag's. DNAs encoding them, derived fusion proteins and other polypeptides fragments, can be used in pharmaceutical compositions or vaccines to generate a protective or therapeutic immune response to M. tuberculosis and as reagents in skin tests for diagnosis of tuberculosis. Ag can induce proliferation of, or cytokine secretion by, T, B or natural killer cells and/or macrophages in tuberculosis-immune subjects. AZ19240 and AXY39083 to AXY39225 are used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New antigens from Mycobacterium tuberculosis useful in diagnostic skin tests and protective or therapeutic vaccines or compositions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             107 APQPVRIDNPVGGFSFALPAGWVESDAAHFDYGSALLSKTTGDPPFPGQPPPVANDTRIV

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel recombinant antigens and their encoding nucleic acids derived from Mycobacterium tuberculosis. The novel polypeptides are useful for detecting M. tuberculosis infection in a biological sample by detecting antibodies which bind with the polypeptides, and are useful as vaccines for immunizing against M. tuberculosis infection. The new detection methods are needed as current vaccination strategies do not provide 100% immunity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          107 APQPVRIDNPVGGFSFALPAGWVESDAAHFDYGSALLSKTTGDPPFPGQPPPVANDTRIV

S.Rubinstein, A.L., Broadwater, A.H.; Lowrey, K.; Bedinger, P.A.
Submitted to the EMBL Data Library, June 1994
A,Description: Pex genes: pollen-specific genes with extensin-like domains.
A,Reference number: S49915
A,Accession: S49915
A,Actus: preliminary
A,Molecule type: DNA
A,Residues: 1-1188

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RESULT 9
verpoin - yeast (Saccharomyces cerevisiae)
NyAlternate names: prolin-rich protein VRP1; protein L0300.13; protein VLR337c
C;Species Saccharomyces cerevisiae
C;Species Saccharomyces cerevisiae
C;Species Saccharomyces cerevisiae
C;Accession: S51342; S39626; S57435
R;Du, Z
submitted to the EMBL Data Library, December 1994
A;Bescription: The sequence of S. cerevisiae cosmid 8300.
A;Reference number: S51339
A;Accession: S51342
A;Molecule type: DNA
A;Residues: 1-817 cDUZ>
A;Molecule type: DNA
A;Residues: EMBL,U19028; NID:G609380; PID:G609392; MIPS:YLR337c
A;Gress-references: EMBL,U19028; NID:G609380; PID:G609392; MIPS:YLR337c
A;Accession: S5136.
A;Accession: S513626; Mulp: Protein, Worlved in cytoskeletal organization and ce
A;Accession: S39626
A;Reference number: S39626; Mulp:95058201; PMID:7968536
